

innovative solutions
for patient care

OpeMed

With all our products manufactured in Europe and over 10 years experience in patient transfer equipment, OpeMed has become the most talked about player in manual handling

Innovative

OpeMed products are unique, achieving manual handling solutions that you will not find elsewhere

Solutions

We are proud of our expertise in tailor made solutions and we offer free, no-obligation consultations, as no room layout, patient or carer are the same

Customers

From Architects and Construction Companies through to Occupational Therapists and Carers, we speak your language. Our knowledge and experience will help you maximize efficiency, reduce risk of injury and increase patient comfort

Ceiling Hoists

The OT200 ceiling hoist system automatically recharges whenever it is in use, meaning you will never be caught without battery power

The combination of our experience and the widest range of track options available allows us to install our ceiling hoist system in almost any situation

Mobile Hoists

The OpeMax is unique in that the patient is kept at their natural centre of gravity, away from the hoist and will lift from the floor to the highest surface

Showering

The lateral transfer shower trolley is offset to allow easy access and transfer on and off the trolley

Our flexible "tilt-in-space" shower chairs and cradles give easy all round access

Bathing

From our Smart Bath with its space saving full size door to our height adjustable baths with rotating seats, we have the right bathing solution

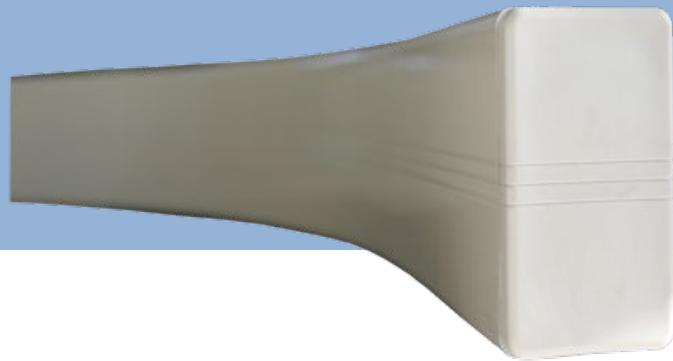

Bariatric

The OpeMax 880 is the only powered drive hoist designed for bariatric use. Our range of bariatric shower trolleys, and heavy duty ceiling hoists complete the range

OT200

a complete ceiling hoist solution
with a unique auto charge

A Ceiling Hoist that you don't see

The white motor and track of the OT200 is designed to blend in and is available either as 2 function (manual traverse) or 4 function (powered up/down and left/right)

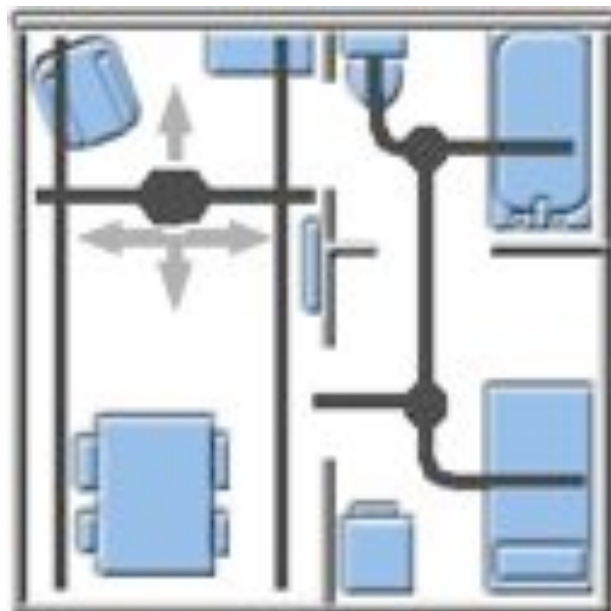

Auto-Charging means there is always power

Unlike all other ceiling hoists the OT200 automatically recharges the batteries whenever the hoist is lowered, meaning that the hoist will never be left with flat batteries. This dynamo system gives over 150 lifts per charge

Almost any track layout possible

With the widest range of options on the market, virtually any layout can be achieved. We understand the correct positioning is critical and OpeMed offer a free, no-obligation CAD survey. It might be our XY system, compact curves, multi-exit turntable or our simple room-to-room system that allows you to get the exact layout you require

Quick, simple emergency system

Unlike competitors the OT200 has a unique, simple emergency lowering system that does not rely on physical winding down with tools or add-ons. This feature allows the OT200 in an emergency to lower the patient quickly, without panic and in safety

Diagnostics

The OT200 has an inbuilt diagnostic screen, allowing the engineer to adjust the speed, fault find and see how often the hoist has been used. Useful to check if manual handling policies are being followed

Options

The OT200 can be fitted with a weigh-scale, loop spreader bar or clip-style cradle, stretcher or walking harness. OpeMed authorise the use of approved competitors clip or loop slings

OT200 Ceiling Hoist

A ceiling hoist solution with auto-charge giving 150 lifts per charge and the widest range of track options on the market. Free consultation & CAD surveys

Shower Trolleys

This unique shower trolley slides over the mattress enabling easy access where space is an issue. Available in three different lengths, battery or hydraulic powered

OpeMax 500

227kg/36st capacity, the patient is kept in their natural centre of gravity with the powered spreader bar. Will lift from the floor without the patient touching the hoist

Tilt Shower Chairs

The range of adult or paediatric chairs and cradles are all "tilt-in-space" to give improved comfort, safety and access whilst reducing slippage. 150kg/ 23.5st

OpeMax 880

A bariatric hoist with a powered drive so no pushing/pulling is required. 400kg/63st capacity, powered spreader bar with 8 fixing points and can end or side load onto a bed

Changing Surface

Height adjustable changing surface is made from a rustproof stainless steel frame, with guard and guard bumper options and the choice of a removable mattress

OpeRaise

Standing hoist with flexible knee pads that adjust as the leg changes angle, powered opening/closing legs and ergonomic handles. Bariatric version available (250kg/39st)

Adjustable Baths

OpeMed offer a range of baths to suit the needs of a wide spectrum of people; from individuals in their own home, to the requirements of carers in Nursing homes or in Hospitals

Bea

Unique standing, showering and transporting aid, designed by ergonomists for active patient rehabilitation. Fits over the bed, around the toilet and between a wheelchair

Side Entry Bathing

The Smart bath has a unique gull-wing style door that gives full access for a wheelchair user to transfer in. The unique door opens and swings so the bath can be positioned in the corner if required
